Business profile

Description:

In the construction area, the company's main area of expertise is network design and execution (electric networks, water networks, cable networks, telephone networks etc.) and designing and constructing residential and non residential buildings. Having 11 years of experience in the field, with many finalized projects, 70% of them in network design and execution and 30% in house building (of which: designed and executed networks on national roads, European roads, communal roads and highways, chalets, houses, hotels), the company is interested in continuing its work abroad, also. Its interest is focused mainly on subcontracting work from companies that have committed to projects regarding the infrastructure field.

It is interested in developing relations and partnering with serious companies dedicated to improve the lives of European citizens and protecting the environment while building safer and more productive habitats for them. This company can do the design of the networks/buildings and it can also do the manual or mechanised labour. As they are only certified in Romania, they would like to subcontract work from the European companies they will be working for. However, if need be, they are willing to get any necessary certification required in the country they will be performing their works (this should be an easy process as Romania is a European country and has legislation in the construction domain in accordance with European laws). This company is interested in collaborating with all European countries.
