4 december 2019

Business profile

Description:

A Spanish ICT company has developed a software technology that manages the lifecycle of IoT devices, enabling companies to reduce time to market project and deployment costs. Additionally it increases the scalability of companies' IoT solutions while boosting their level of security.

The core element of this technology is a secure Linux-based operating system, optimized for IoT (Internet Of Things). This OS (Operating System) constitutes the basis to build a secure environment around the device.

In order to complete its technology, the Spanish company is looking for a manufacturer of a gateway hardware with different technical features that will be integrated within its solution.

The kind of partnership sought is manufacturing agreement.
