Technologic information profile

Title:

Novel food supplements encapsulation method

Description:

This Ukrainian company is actively involved in the creation and distribution of food supplements developed a new method of shell coverage for supplements that are not destroyed in the stomach, made from natural ingredients and ensuring the safety of the contents. The release of the active substance occurs directly in the intestine. When using bifido or lactobacilli, they remain alive and colonized in the intestine.

The company can use this coverage for the different type of supplements to enhance its efficiency.

The manufactory is set up in Ukraine and can arrange delivery to the countries of the European Union. SME offers

this technology for a wide range of bioactive supplements (fatty acids + peptides; mink oil elastin and collagen; extract of seaweed; natural minerals; vegetable oils and extracts; essential oils, etc.) and interested in signing manufacturing agreement.
